New Directions in the Study of Happiness: United States and International Perspectives

The academic study of human happiness has emerged as one of the most vibrant and exciting research programs in the social sciences and humanities. Leading scholars from several disciplines are coming together at the University of Notre Dame to present and evaluate contributions to the rapidly-growing area of happiness studies. They will discuss issues such as:

- What is happiness?
- How do we measure happiness?
- What does happiness depend on?
- Does money buy happiness—why or why not?
- How is justice related to happiness?
- What kinds of economic, social and political arrangements increase happiness?
- What is the future of happiness studies?
- What should be done to increase the amount of happiness in the world?

This conference is sponsored principally by the Department of Economics and Policy Studies and by the Program in American Democracy through a grant from the Annenberg Foundation, with additional support from Institute of Scholarship in the Liberal Arts, the Department of Sociology, the Center for the Study of Social Movements and Social Change, and the College of Arts and Letters at the University of Notre Dame.
