# Facial Recognition with OpenCV and WorkQueue

THOMAS DERANEK, MICHAEL MARTINEZ

## Objective

- Parallelize the OpenCV facial recognition algorithm.
- Determine the effectiveness of OpenCV's Fisher facial recognition method over large and varied data sets.
- Measured by runtime and accuracy.

## Facial Recognition with OpenCV

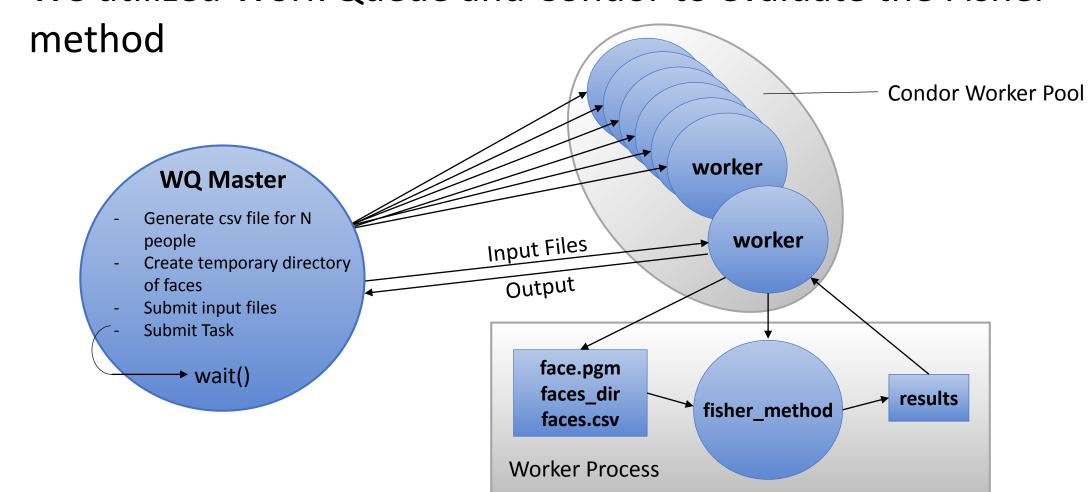

- OpenCV Open Source Computer Vision
- Eigenfaces
  - ▶ PCA Principle Component Analysis
- ▶ Fisherfaces
  - ► LDA Linear Discriminant Analysis
- Toolset
  - Python
  - ► C++
  - Work Queue
  - ▶ Notre Dame Condor

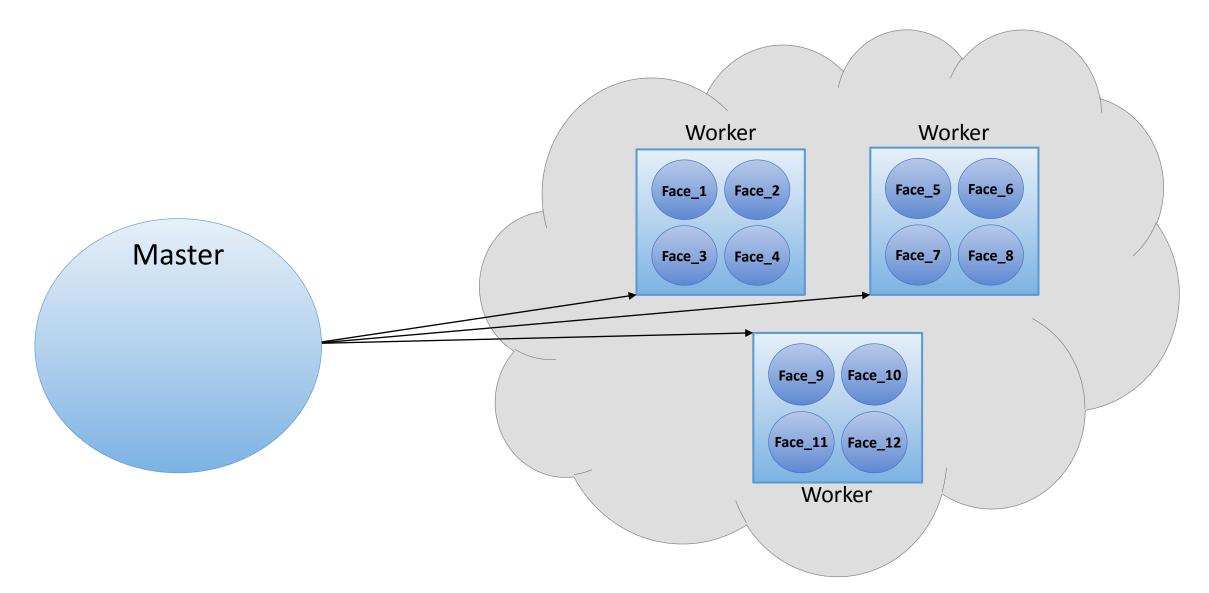

## Program Architecture

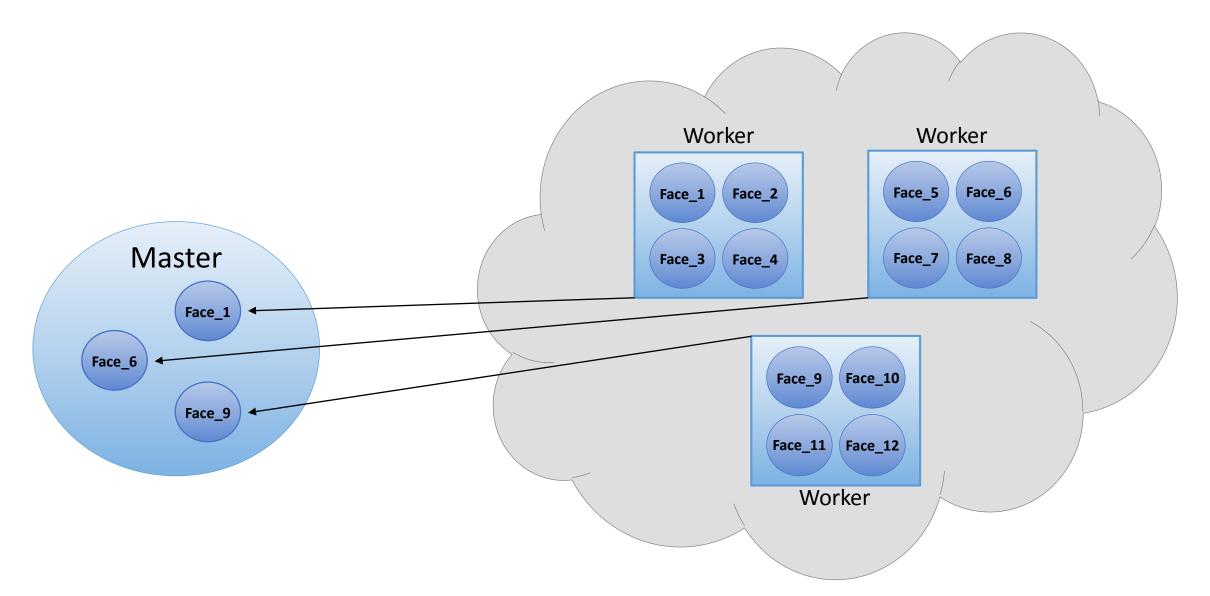

We utilized Work Queue and Condor to evaluate the Fisher
