

NATO Advanced Research Workshop

Climate Change, Human Health and National Security

28 - 30 April 2011
Dubrovnik, Croatia

Hosted By:

University of Notre Dame (Harindra Joseph Fernando)
University of Zagreb (Zvezdana Bencetić Klaić)

Participants of this workshop will explore the intricate relationships between climate change, human health and the security of nations, and how these relationships are mediated by conflicts arising from scarcity of water resources, impacts on food production, rising energy demands, and deteriorating human health and behavioral changes. The intended outcome is the publication of a document outlining the state-of-the-art of understanding of these issues and their interrelationships as well as identification of future research and policy and management needs.

Participation in this workshop is by invitation only with each attendee presenting an overview of the current understanding of their field followed by a discussion on how their work is related to the theme of the workshop.

Workshop Coordinator:
Jennifer McCulley
(Arizona State University)
