

A Multidisciplinary University Research Initiative (MURI)

Sponsored by the Department of Defense

MATERHORN

The Technology Component (MATERHORN-T)

Ronald Scott Coppersmith
Mike Zenk

MATERHORN

The Technology Component (MATERHORN-T)

Ronald Scott Coppersmith

Mike Zenk

University of Notre Dame

- UAV and autopilot purchased – not yet delivered
- Some instrumentation complete, some in development
- New instrumentation – FASS (Pat Dunn),
- CTA signal conditioning for UAV (based on Stas Gordeyev circuit)
- Exact flight path still under discussion
- Exact phenomenon to be measured still under discussion
- More questions than answers today
- Multi-department project

MATERHORN

The Technology Component (MATERHORN-T)

UAV

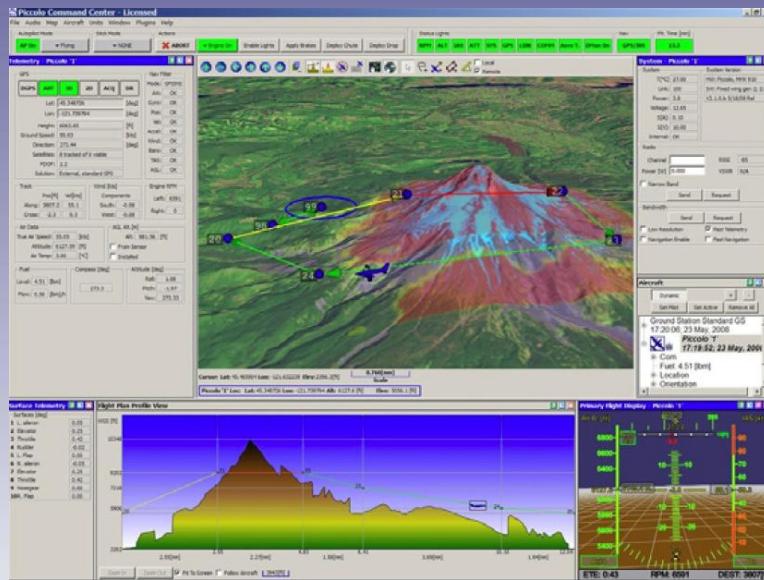

- Flamingo F-15 UAV manufactured in Australia by Silvertone Electronics
 - Wing Span 4 Meters
 - Length 2.9 Meters
 - Dry Weight 10 Kg
 - Max Flying Weight 20 Kg (with fuel and payload)
 - Top Speed 90 mph – 144 kph
 - Stall Speed 36 mph – 58 kph
 - Flight Time up to 7 hours

MATERHORN

The Technology Component (MATERHORN-T)

Autopilot

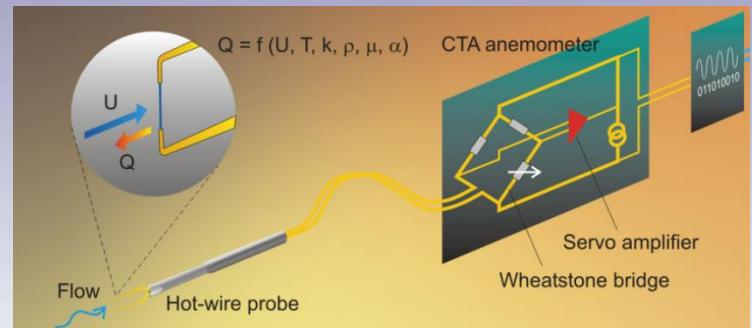

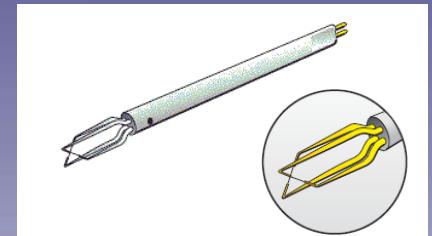

- Cloud Cap Technology – Piccolo SL
- 900 MHz Radio
- 4 Hz GPS, Analog/Digital/RS232 I/O
- Portable Ground Station

MATERHORN

The Technology Component (MATERHORN-T)

Instrumentation

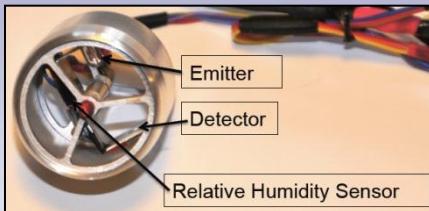

MATERHORN

The Technology Component (MATERHORN-T)

Instrumentation

- Zotac IONITX-P-E Celeron 1.2 GHz dual-core Mini ITX Motherboard
- National Instruments PCIe-6343, 32-ch 500 kS/s 16-bit Data Acq.
- RM Young 81000 Ultrasonic Anemometer with Dual X-Hot Film CTA
- Fog Aerosol Sampling System (FASS)
- OCZ 480 GB Solid State Hard Drive for Data Storage using LabView
- Custom CTA Bridges and Instrumentation Signal Conditioning for UAV
- LiPoly Battery Power Supply

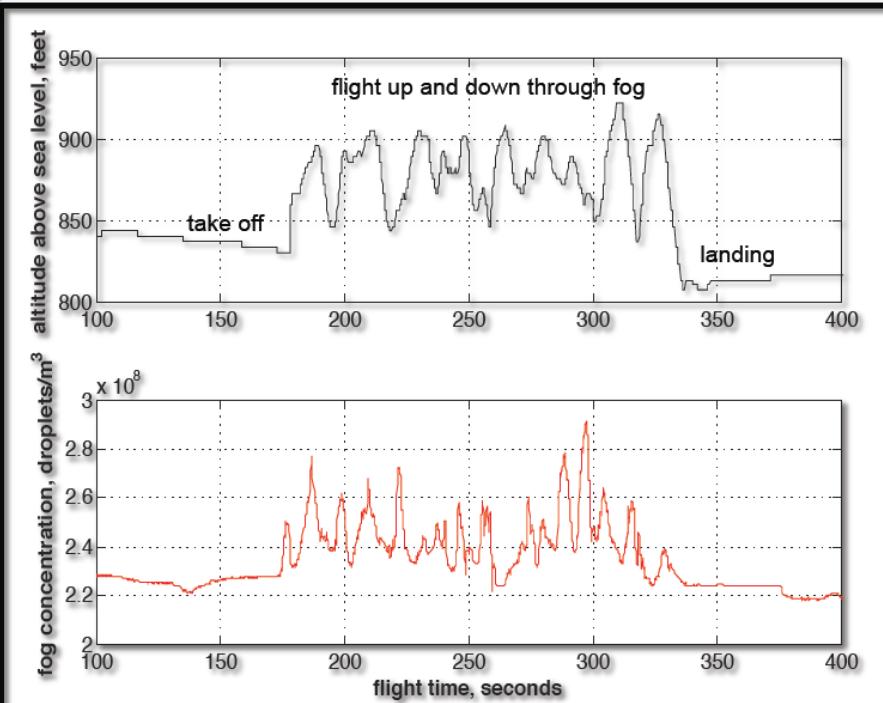

←FASS

MATERHORN

The Technology Component (MATERHORN-T)

FASS-RPV Flight Test Result

Flight altitude and fog concentration as RPV flies up and down through cloud of fog above runway.

MATERHORN

The Technology Component (MATERHORN-T)

Prototype Fog Sensor (side view and circuit board)

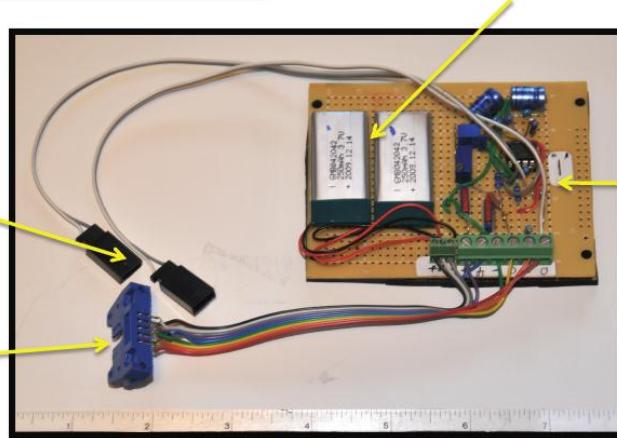

Weight of FASS and circuitry: 0.7 lbf.
Duration of autonomous operation: ~1 h.

LiPoly Batteries

CTA Hot Film Circuits

MATERHORN

The Technology Component (MATERHORN-T)

Instrumentation

➤ Other Instruments:

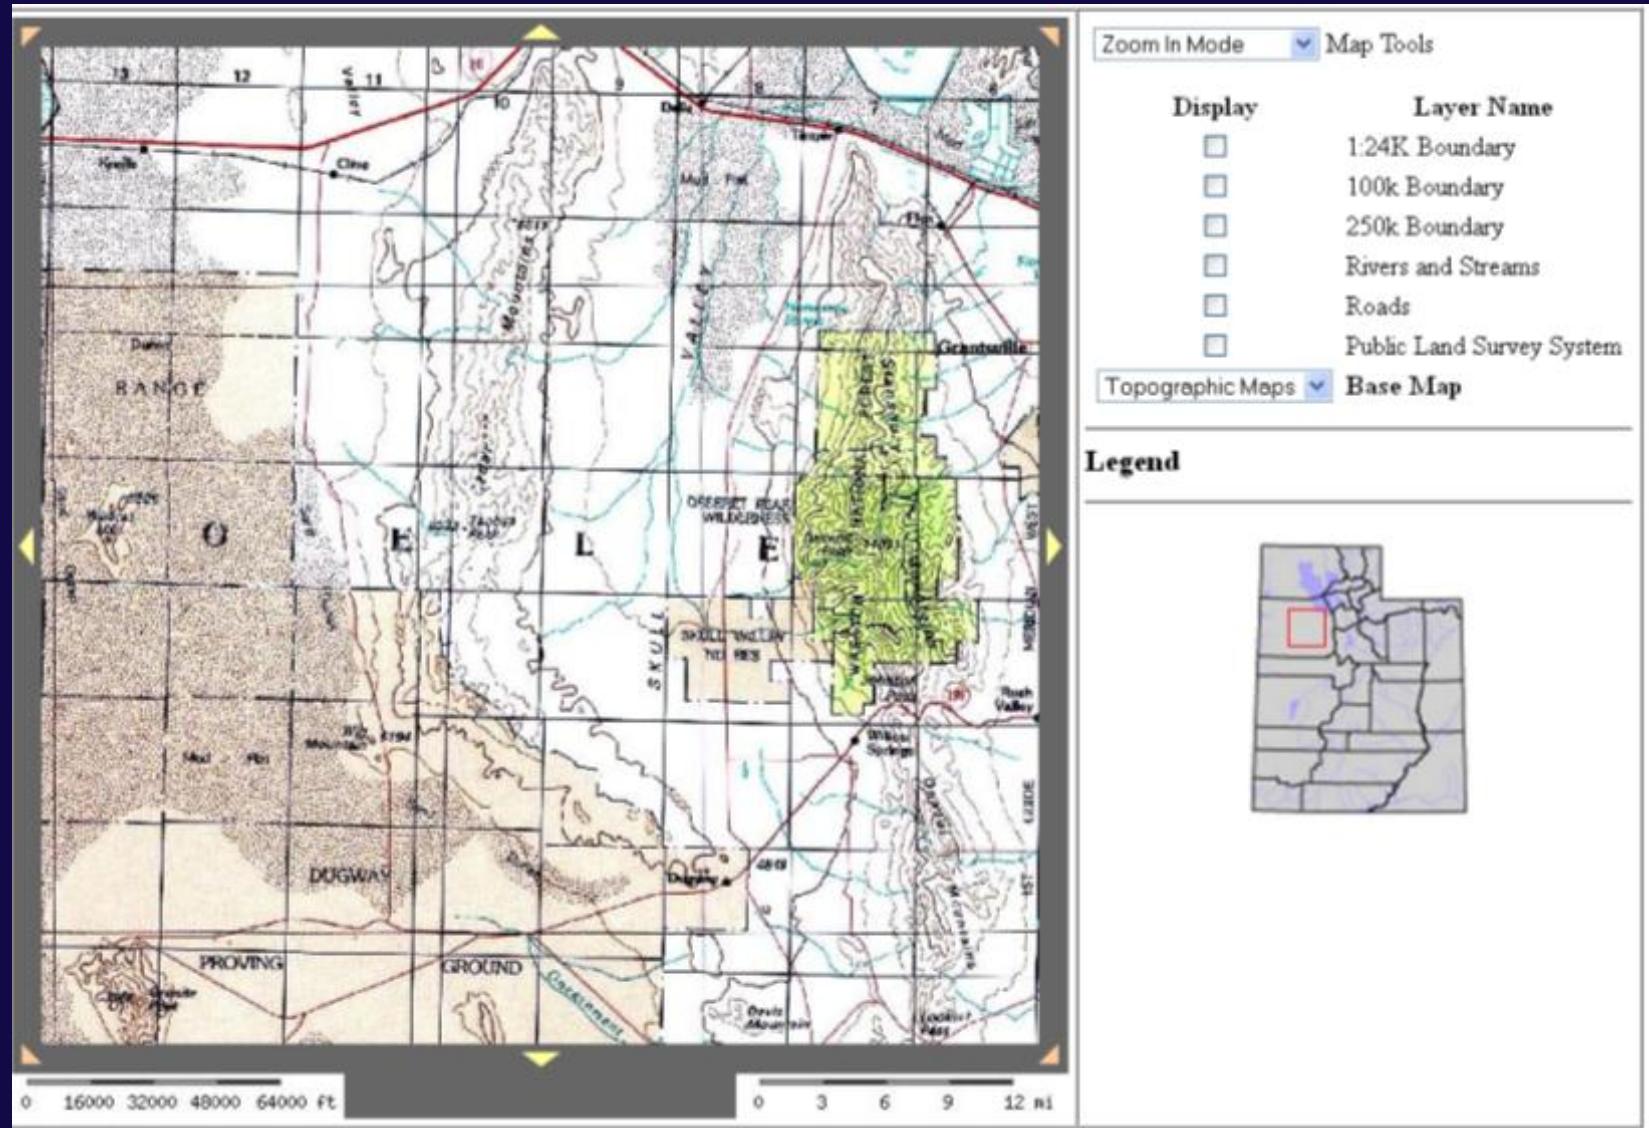

- Fine-wire Thermocouples (inside and outside UAV)
- Pitot Tube
- Relative Humidity Sensor
- Data From Autopilot System, Accelerometers, Pitch, Yaw, Roll, Airspeed, Position (GPS)
- Triggered Data Acquisition

Salt Lake City to Dugway Proving Ground

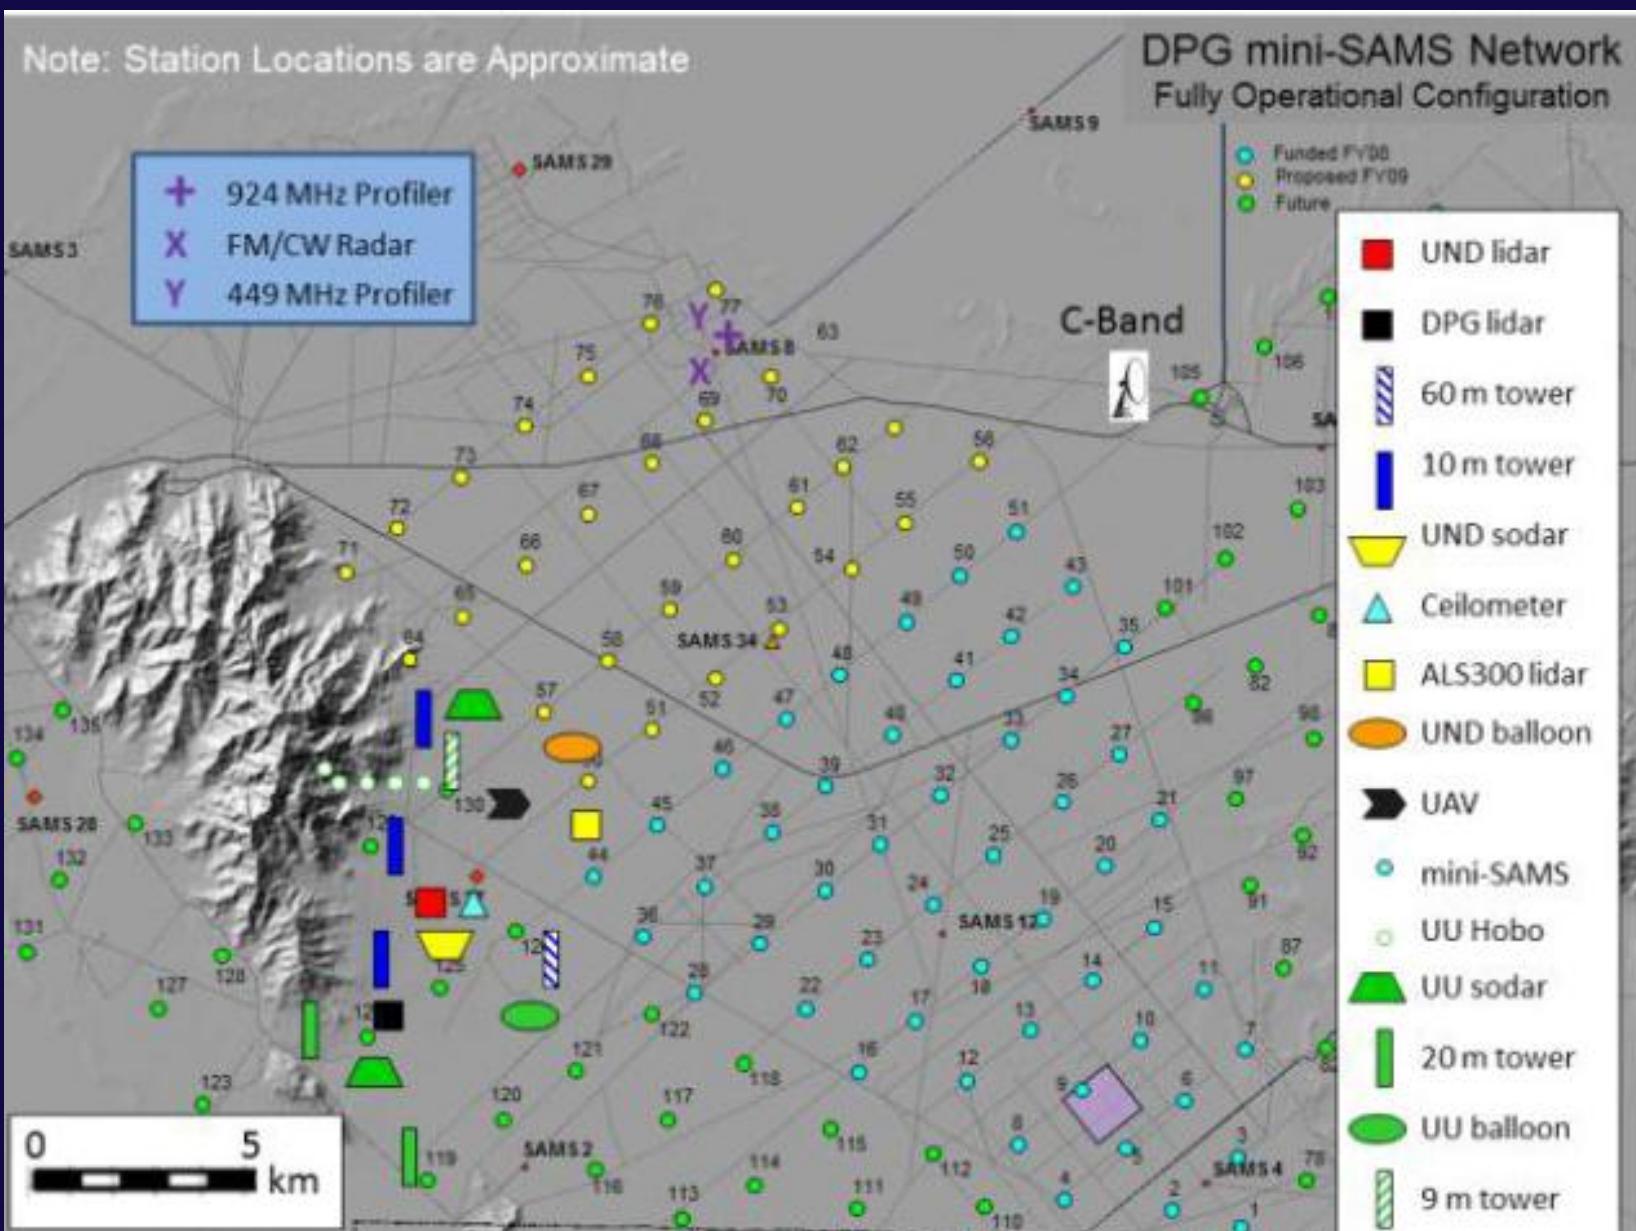

Michael AAF to Granite Mountain

Proposed flight path

Instrumentation Locations

East Face of Granite Mountain

Granite Mountain Peak

Granite Peak Elevation Contours

4500ft to 7000ft
