NOTE: This grading scale is for entertainment purposes only! These cut-offs are not legally binding, but rather my best guess at this point in time and are subject to change.

Instructions:
To figure out where you currently stand without taking the final, simply add up your total midterm/quiz points to get a total out of 300.

To figure out what you would need to get on the final to improve:

- Subtract 5 points from your midterm #1 score
- Add 5 points to your midterm #2 score
- To improve your grade you need to get X number of points above your lowest adjusted score.

Example: Suppose that your scores are as follows:

- Midterm #1: 80
- Midterm #2: 72
- Quiz Total: 62

Total points: 214
Current Grade: B-

Lowest Midterm
Adjusted Midterm #1: 75
Adjusted Midterm #2: 77

You would need at least an 86 on the final to move your grade to a B
