Math 10360 – Example Set 05A Section 7.1 - Integration by Parts

1. A 10m chain with non-uniform linear mass density $\rho(y) = e^y \text{ kg/m}$ for $0 \le y \le 10$ is coiled on the ground is lifted straight up from its heavier end (labelled A) so that End A is 10m above the ground and the rest of the chain dangles free below. Find the work done in lifting the chain. You may take the acceleration due to gravity as $g = 10 \text{m/s}^2$.

Integration by Parts

IDEA: Recall that Integration by Substitution "reverses" chain rule. Today we learn another technique, called *integration by parts*, which "reverses" the product rule.

Let u(x) and v(x) be two differentiable functions. Applying product rule, we have:

$$\frac{d}{dx}(u(x)v(x)) = u(x)v'(x) + u'(x)v(x)$$

By definition of anti-derivative:

$$u(x)v(x) = _ = \int u(x)v'(x) \, dx + \int u'(x)v(x) \, dx.$$

Rearranging terms, we have:

$$\int u(x)v'(x)\,dx = u(x)v(x) - \int v(x)u'(x)\,dx$$

Note
$$\frac{du}{dx} = u'(x) \Rightarrow du =$$
 _____. Also $\frac{dv}{dx} = v'(x) \Rightarrow dv =$ _____.

Suppressing variable x, we get:

$$\int u \, dv =$$
 . \rightarrow Integration by Parts Formula

As a definite integral, we have:

$$\int_{a}^{b} u \, dv =$$

2. Evaluate the following integrals:

(a)
$$\int_0^{10} y e^y \, dy$$

(c) $\int x e^{x^2} dx$

(b) $\int x^3 \ln x \, dx$

(d) $\int \arctan x \, dx$

2e. $\int \sin^4 x \cos x \, dx \stackrel{?}{=}$

Math 10360 – Example Set 05B Section 7.2 Trigonometric Integrals

1. Use the following identities to complete the blanks below:

	$\sin(A+B) = \sin A \cos B + \cos A \sin B$
	$\sin(A - B) = \sin A \cos B - \cos A \sin B$
	$\cos(A+B) = \cos A \cos B - \sin A \sin B$
	$\cos(A - B) = \cos A \cos B + \sin A \sin B$
$\sin A \cos B = _$	
$\cos A \cos B =$	
$\sin A \sin B = _$	
$\sin(2A) = _$	

The Pythagorean Identities and one of the given identities above, write the following in terms of $\cos(2A)$:

$$\cos^2 A = \underline{\qquad}$$

 $\sin^2 A =$

2. Using appropriate identities, evaluate the following definite integrals:

a.
$$\int \sin(2x)\cos(3x) dx$$

b. $\int \cos^2 2z \, dz$
c. $\int_0^{\pi/3} \sin^5 x \, dx$
d. $\int_0^{\pi} \sin^4(x) \, dx$
e. $\int_0^{\pi/2} \cos(5x)\cos(x) \, dx$
