$\qquad$

1. Suppose $\operatorname{Pr}(E)=0.8, \operatorname{Pr}(F)=0.2, \operatorname{Pr}(G)=0.4, \operatorname{Pr}(E \cap F)=0.16$, $\operatorname{Pr}(F \cap G)=0.4$.
a. (1 pt.) Are E, F independent events?
b. (1 pt.) Are F, G independent events?
2. Suppose $\mathrm{E}, \mathrm{F}$ are independent events and $\operatorname{Pr}(\mathrm{E})=0.5, \operatorname{Pr}(\mathrm{~F})=0.3$.
a. (1 pt.) $\operatorname{Pr}(\mathrm{EIF})=$
b. ( 1 pt.) $\operatorname{Pr}(E \cap F)=$
3. Consider the following tree diagram:

Use this diagram to answer the following questions:
a. (1 pt.) $\operatorname{Pr}(B)=$
b. $(1$ pt. $) \operatorname{Pr}\left(\mathrm{B}^{\prime}\right)=$
c. $(1$ pt. $) \operatorname{Pr}(\mathrm{ClB})=$
d. (1 pt.) $\operatorname{Pr}(B \cap C)=$
e. (1 pt.) $\operatorname{Pr}(\mathrm{C})=$
f. (1 pt.) $\operatorname{Pr}(\mathrm{BIC})=$
