Information for Students in Math 323

Instructor: Professor Kok-Wee Phan, 305 Comp.Math Building. Phone: 631-7165 E-Mail: Phan.1nd.edu
Text: "Introduction to Probability and its Applications, 2nd Ed." by Richard L. Scheaffer. You are

encouraged to read each section before it is covered. You are expected to bring the text to each class. To do well, you must keep up with the homework and review frequently. Syllabus: We expect to cover most of the book. Examinations: There will be three tests, all at the regular class time, and a final exam.

TEST1 Friday, February 7 TEST2 Monday, March 3 TEST3 Wednesday, April 16 FINAL Tuesday, May

Test problems will be multiple choice and will be similar to lecture examples and homework problems. Grading: The three tests and final exam will be corrected and graded uniformly. Each of the

three tests will be worth 100 points, and the final will be worth 150 points. Each homework will be graded and the homework total will then be scaled so that it is worth 50 points. Letter grades will be based on total points out of the 500 possible. Homework: Homework will be assigned almost

every class and is due at the end of the next class. Homework will be accepted one class period late, but not after that. Before you begin an assignment you should carefully work through both the examples done in class and those in the text. Absence from Examinations: A student who is absent

from an examination without an official excuse shall receive a grade of zero for that examination. A student who is officially excused shall not be penalized. If you miss a test for any reason, you should call your instructor or the Mathematics Department as soon as possible. Honor Code: Testing will

be done under the Honor Code. On homework, you are allowed and encouraged to work together, but what you hand in should not be merely copied.
