

**The Deductive Calculus**  
Math 609

**RULES OF INFERENCE.**

**Modus Ponens.** From  $\varphi$  and  $\varphi \rightarrow \psi$  infer  $\psi$ .

**LOGICAL AXIOMS.**

If  $\varphi$  is a logical axiom, then  $\forall x \varphi$  is also a logical axiom.

1. Every tautology is a logical axiom.
2.  $\forall x \varphi(x) \rightarrow \varphi(t)$  where  $t$  is substitutable for  $x$  in  $\varphi$ .
3.  $\forall x(\varphi \rightarrow \psi) \rightarrow (\forall x \varphi \rightarrow \forall x \psi)$  for all formulas  $\varphi$  and  $\psi$ .
4.  $\varphi \rightarrow \forall x \varphi$  where  $x$  does not occur freely in  $\varphi$ .
5.  $x \doteq x$ .
6.  $x \doteq y \rightarrow (\alpha \rightarrow \alpha')$  where  $\alpha$  is atomic and  $\alpha'$  is obtained by replacing some occurrences of  $x$  in  $\alpha$  by  $y$ .
