# Wrapping spheres around spheres 

Mark Behrens
(Dept of Mathematics)

## Spheres??

$S^{2}$

1-dimensional sphere

2-dimensional sphere

3-dimensional sphere and higher...
(I'll explain later!)

## Wrapping spheres?

Wrapping $\mathrm{S}^{1}$ around $\mathrm{S}^{1}$

- Wrapping one circle around another circle
- Wrapping rubber band around your finger

## ...another example...

Wrapping $\mathrm{S}^{1}$ around $\mathrm{S}^{2}$
-Wrapping circle around sphere
-Wrapping rubber band around globe

## ...and another example.

Wrapping $\mathrm{S}^{2}$ around $\mathrm{S}^{1}$

- Wrapping sphere around circle
- Flatten balloon, stretch around circle

# Goal: Understand all of the ways to wrap $S^{k}$ around $S^{n}$ ! 

- n and k are positive numbers
- Classifying the ways you can wrap is VERY HARD!
- Turns out that interesting patterns emerge as n and k vary.
- We'd like to do this for not just spheres, but for other geometric objects - spheres are just the simplest!

## Plan of talk

- Explain what I mean by "higher dimensional spheres"
- Work out specific low-dimensional examples
- Present data for what is known
- Investigate number patterns in this data

## n-dimensional space

To specify a point, give 2 numbers

## 3-dimensional space

-The world we live in

- To specify a point, give 3 numbers ( $x, y, z$ ).

## Higher dimensional space

- Points in 4-dimensional space are specified with 4 numbers ( $x, y, z, w$ )
- Points in n-dimensional space are specified with $n$ numbers:

$$
\left(x_{1}, x_{2}, x_{3}, \ldots \ldots, x_{n}\right)
$$

## Higher dimensional spheres:

The circle $S^{1}$ is the collection of all points ( $\mathrm{x}, \mathrm{y}$ ) in 2-dimensional space of distance 1 from the origin $(0,0)$.

## Higher dimensional spheres:

The sphere $\mathrm{S}^{2}$ is the collection of all points ( $x, y, z$ ) in 3-dimensional space of distance 1 from the origin $(0,0,0)$.
$\sqrt{x^{2}+y^{2}+z^{2}}=1$

## Higher dimensional spheres:

$S^{3}$ is the collection of all points ( $x, y, z, w$ ) in 4-dimensional space of distance 1 from the origin ( $0,0,0,0$ ).

$$
\sqrt{x^{2}+y^{2}+z^{2}+w^{2}}=1
$$

$S^{n-1}$ is the collection of all points $\left(x_{1}, \ldots, x_{n}\right)$ in n -dimensional space of distance 1 from the origin.

$$
\sqrt{x_{1}^{2}+x_{2}^{2}+x_{3}^{2}+\cdots+x_{n}^{2}}=1
$$

## Spheres: another approach

(This will help us visualize $\mathrm{S}^{3}$ )
$S^{1}$ is obtained by taking a line segment and gluing the ends together:

## Spheres: another approach

(This will help us visualize $\mathrm{S}^{3}$ )
$S^{2}$ is obtained by taking a disk and gluing the opposite sides together:

## Spheres: another approach

(This will help us visualize $\mathrm{S}^{3}$ )
$S^{3}$ is obtained by taking a solid ball and gluing the opposite hemispheres together:

## Spheres: another approach

 (This will help us visualize $\mathrm{S}^{3}$ )You can think of $S^{3}$ this way: If you are flying around in $\mathrm{S}^{3}$, and fly through the surface in the northern hemisphere, you reemerge in the southern hemisphere.

## Wrapping $S^{1}$ around $S^{1}$

For each positive integer n, we can wrap the circle around the circle n times

## Wrapping $S^{1}$ around $S^{1}$

We can wrap counterclockwise to get the negative numbers

## The unwrap

A trivial example: just drop the circle onto the circle.

The unwrap wraps 0 times around

## Equivalent wrappings

We say that two wrappings are equivalent if one can be adjusted to give the other

For example:
This wrapping is equivalent to...
...this wrapping. (the "wrap 1")

## Winding number

Every wrapping of $S^{1}$ by $S^{1}$ is equivalent to "wrap $n$ " for some integer $n$. Which wrap is this equivalent to?

Handy trick:

1) Draw a line perpendicular to $S^{1}$
2) Mark each intersection point with + or - depending on direction of crossing
3) Add up the numbers - this is the

"winding number"

## What have we learned:

The winding number gives a correspondence:

## Wrapping $S^{1}$ around $S^{2}$

## What have we learned:

- Every way of wrapping $S^{1}$ around $S^{2}$ is equivalent to the "unwrap"
- FACT: the same is true for wrapping any sphere around a larger dimensional sphere.
- REASON: there will always be some place of the larger sphere which is uncovered, from which you can "push the wrapping off".

## Wrapping $\mathrm{S}^{2}$ around $\mathrm{S}^{2}$ :

Wrap 0

Wrap 1

Wrap 2
(Get negative wraps by turning sphere inside out)

## "Winding number"

Same trick for $S^{1}$ works for $S^{2}$ for computing the "winding number"

Winding number $=1+1=2$

## Fact:

The winding number gives a correspondence:

## General Fact!

The winding number gives a correspondence:

## Summary:

## Wrapping $\mathrm{S}^{2}$ around $\mathrm{S}^{1}$ :

Consider the example given earlier:

In fact, this wrap is equivalent to The unwrap, because you can "shrink the balloon"

## What have we learned:

This sort of thing always happens, and we have:

Turns out that this is just a fluke!
There are many interesting ways to wrap $\mathrm{S}^{\mathrm{n+k}}$ around $\mathrm{S}^{\mathrm{n}}$ for $\mathrm{n}>1$, and $\mathrm{k}>0$.

## Wrapping $\mathrm{S}^{3}$ around $\mathrm{S}^{2}$ :

Recall: we are thinking of $S^{3}$ as a solid ball with the northern hemisphere glued to the southern hemisphere.

Consider the unwrap:

1) Take two points in $S^{2}$
2) Examine all points in $S^{3}$ that get sent to these two points.
3) Because the top and bottom are identified, these give two separate circles in $\mathrm{S}^{3}$.

## Hopf fibration: a way to wrap $S^{3}$ around $\mathrm{S}^{2}$ different from the unwrap

## Hopf fibration: a way to wrap $\mathrm{S}^{3}$

 around $\mathrm{S}^{2}$ different from the unwrap

## Keyring model of Hopf fibration

## FeC+

Counting the number of times these circles are linked gives a correspondence:
$\left(\right.$ Ways to wrap $\mathrm{S}^{3}$ around $\left.\mathrm{S}^{2}\right) \longleftrightarrow\binom{$ The integers: }{$\ldots-2,-1,0,1,2, \ldots}$

## Number of ways to wrap $\mathbf{S}^{n+k}$ around $\mathbf{S}^{n}$

|  | $\mathrm{n}=2$ | $\mathrm{n}=3$ | $\mathrm{n}=4$ | $\mathrm{n}=5$ | $\mathrm{n}=6$ | n=7 | $\mathrm{n}=8$ | n=9 | $\mathrm{n}=10$ | $\mathrm{n}=11$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| k=1 | Z | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 |
| k=2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 |
| k=3 | 2 | 12 | Z*12 | 24 | 24 | 24 | 24 | 24 | 24 | 24 |
| k=4 | 12 | 2 | $2^{2}$ | 2 | 0 | 0 | 0 | 0 | 0 | 0 |
| k=5 | 2 | 2 | $2^{2}$ | 2 | Z | 0 | 0 | 0 | 0 | 0 |
| k=6 | 2 | 3 | 24*3 | 2 | 2 | 2 | 2 | 2 | 2 | 2 |
| k=7 | 3 | 15 | 15 | 30 | 60 | 120 | Z*120 | 240 | 240 | 240 |
| k=8 | 15 | 2 | 2 | 2 | 8*6 | $2^{3}$ | $2^{4}$ | $2^{3}$ | $2^{2}$ | $2^{2}$ |
| k=9 | 2 | $2^{2}$ | $2^{3}$ | $2^{3}$ | $2^{3}$ | $2^{4}$ | $2^{5}$ | $2^{4}$ | $\mathrm{Z}^{*} 2^{3}$ | $2^{3}$ |
| k=10 | $2^{2}$ | 12*2 | $\begin{aligned} & 40 * 4^{*} \\ & 2 * 3^{2} \end{aligned}$ | 18*8 | 18*8 | 24*2 | $8^{2 *} 2^{*} 3^{2}$ | 24*2 | 12*2 | $2^{2 *} 3$ |
| k=11 | 12*2 | $84 * 2^{2}$ | $84 * 2^{5}$ | $504 * 2^{2}$ | 504*4 | 504*2 | 504*2 | 504*2 | 504 | 504 |

Note: "Z" means the integers

Some of the numbers are factored to indicate that there are distinct ways of wrapping

## Number of ways to wrap $\mathbf{S}^{n+k}$ around $\mathbf{S}^{n}$

|  | $\mathrm{n}=2$ | $\mathrm{n}=3$ | $\mathrm{n}=4$ | $\mathrm{n}=5$ | $\mathrm{n}=6$ | n=7 | $\mathrm{n}=8$ | n=9 | $\mathrm{n}=10$ | $\mathrm{n}=11$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| k=1 | Z | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 |
| k=2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 |
| k=3 | 2 | 12 | Z*12 | 24 | 24 | 24 | 24 | 24 | 24 | 24 |
| k=4 | 12 | 2 | $2^{2}$ | 2 | 0 | 0 | 0 | 0 | 0 | 0 |
| k=5 | 2 | 2 | $2^{2}$ | 2 | Z | 0 | 0 | 0 | 0 | 0 |
| k=6 | 2 | 3 | 24*3 | 2 | 2 | 2 | 2 | 2 | 2 | 2 |
| k=7 | 3 | 15 | 15 | 30 | 60 | 120 | Z*120 | 240 | 240 | 240 |
| k=8 | 15 | 2 | 2 | 2 | 8*6 | $2^{3}$ | $2^{4}$ | $2^{3}$ | $2^{2}$ | $2^{2}$ |
| k=9 | 2 | $2^{2}$ | $2^{3}$ | $2^{3}$ | $2^{3}$ | $2^{4}$ | $2^{5}$ | $2^{4}$ | $\mathrm{Z}^{*} 2^{3}$ | $2^{3}$ |
| k=10 | $2^{2}$ | 12*2 | $\begin{aligned} & 40 * 4^{*} \\ & 2 * 3^{2} \end{aligned}$ | 18*8 | 18*8 | 24*2 | $8^{2 *} 2^{*} 3^{2}$ | 24*2 | 12*2 | $2^{2 *} 3$ |
| k=11 | 12*2 | $84 * 2^{2}$ | $84 * 2^{5}$ | $504 * 2^{2}$ | 504*4 | 504*2 | 504*2 | 504*2 | 504 | 504 |

The integers form an infinite set - the only copies of the integers are shown in red. This pattern continues. All of the other numbers are finite!

## Number of ways to wrap $\mathbf{S}^{n+k}$ around $\mathbf{S}^{n}$

|  | $\mathrm{n}=2$ | $\mathrm{n}=3$ | $\mathrm{n}=4$ | $\mathrm{n}=5$ | $\mathrm{n}=6$ | $\mathrm{n}=7$ | $\mathrm{n}=8$ | $\mathrm{n}=9$ | $\mathrm{n}=10$ | $\mathrm{n}=11$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| k=1 | Z | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 |
| k=2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 2 |
| k=3 | 2 | 12 | Z*12 | 24 | 24 | 24 | 24 | 24 | 24 | 24 |
| k=4 | 12 | 2 | $2^{2}$ | 2 | 0 | 0 | 0 | 0 | 0 | 0 |

| k=6 | 2 | 3 | 24*3 | 2 | 2 | 2 | 2 | 2 | 2 | 2 |
| k=7 | 3 | 15 | 15 | 30 | 60 | 120 | Z ${ }^{\text {1 }} 120$ | 240 | 240 | 240 |
| k=8 | 15 | 2 | 2 | 2 | 8*6 | $2^{3}$ | $2^{4}$ | $2^{3}$ | $2{ }^{2}$ | $2^{2}$ |
| k=9 | 2 | $2^{2}$ | $2^{3}$ | $2^{3}$ | $2^{3}$ | $2^{4}$ | $2^{5}$ | $2^{4}$ | $\mathrm{Z}^{*} 2^{3}$ | $2^{3}$ |
| $\mathrm{k}=10$ | $2^{2}$ | 12*2 | $\begin{aligned} & 40^{*} 4^{*} \\ & 23^{*} \end{aligned}$ | 18*8 | 18*8 | 24*2 | $8^{2} 2^{*} 3^{2}$ | 24*2 | 12*2 | $2^{2 *} 3$ |
| $\mathrm{k}=11$ | 12*2 | $84 * 2^{2}$ | $84 * 2^{5}$ | $504 * 2^{2}$ | 504*4 | 504*2 | 504*2 | 504*2 | 504 | 504 |

STABLE RANGE: After a certain point, these values become independent of $n$

## Stable values

Below is a table of the stable values for various $k$.

| $k=1$ | $k=2$ | $k=3$ | $k=4$ | $k=5$ | $k=6$ | $k=7$ | $k=8$ | $k=9$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 2 | 2 | 24 | 0 | 0 | 2 | 240 | $2^{2}$ | $2^{3}$ |

| $k=10$ | $k=11$ | $k=12$ | $k=13$ | $k=14$ | $k=15$ | $k=16$ | $k=17$ | $k=18$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $2^{*} 3$ | 504 | 0 | 3 | $2^{2}$ | $480^{*} 2$ | $2^{2}$ | $2^{4}$ | $8^{*} 2$ |

## Stable values

Below is a table of the stable values for various $k$. Here are their prime factorizations.

| $k=1$ | $k=2$ | $k=3$ | $k=4$ | $k=5$ | $k=6$ | $k=7$ | $k=8$ | $k=9$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 2 | 2 | $2^{3 *} 3$ | 0 | 0 | 2 | $2^{4 *} 3^{*} 5$ | $(2)(2)$ | $(2)(2)(2)$ |

| $k=10$ | $k=11$ | $k=12$ | $k=13$ | $k=14$ | $k=15$ | $k=16$ | $k=17$ | $k=18$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $(2)(3)$ | $2^{3 *} 3^{2 *} 7$ | 0 | 3 | $(2)(2)$ | $\left(2^{5 *} 3^{*} 5\right)$ <br> $(2)$ | $(2)(2)$ | $(2)(2)$ <br> $(2)(2)$ | $\left(2^{3}\right)(2)$ |

## Stable values

## Below is a table of the stable values for various $k$.

Note that there is a factor of $2^{i}$ whenever $k+1$ has a factor of $2^{i-1}$ and is a multiple of 4

| $k=1$ | $k=2$ | $k=3$ | $k=4$ <br> $=2^{2}$ | $k=5$ | $k=6$ | $k=7$ | $k=8$ <br> $=2^{3}$ | $k=9$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 2 | 2 | $2^{3^{*} 3}$ | 0 | 0 | 2 | $2^{2^{*} 3^{*} 5}$ | $(2)(2)$ | $(2)(2)(2)$ |

| $k=10$ | $k=11$ | $\mathrm{k}=12$ <br> $=2^{2 *} 3$ | $\mathrm{k}=13$ | $\mathrm{k}=14$ | $\mathrm{k}=15$ | $\mathrm{k}=16$ <br> $=2^{4}$ | $\mathrm{k}=17$ | $\mathrm{k}=18$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $(2)(3)$ | $2^{3 * 3^{2 *} 7}$ | 0 | 3 | $(2)(2)$ | $\left(2^{5 *} 3^{*} 5\right)$ <br> $(2)$ | $(2)(2)$ | $(2)(2)$ <br> $(2)(2)$ | $\left(2^{3}\right)(2)$ |

## Stable values

Below is a table of the stable values for various $k$.
There is a factor of $3^{i}$ whenever $k+1$ has a factor of $3^{i-1}$ and is divisible by 4

| $k=1$ | $k=2$ | $k=3$ | $k=4$ <br> $=4$ | $k=5$ | $k=6$ | $k=7$ | $k=8$ <br> $=4^{*} 2$ | $k=9$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 2 | 2 | $2^{3 *} 3$ | 0 | 0 | 2 | $2^{4 *} 3^{*} 5$ | $(2)(2)$ | $(2)(2)(2)$ |

| $k=10$ | $k=11$ | $k=12$ <br> $=4^{*} 3$ | $k=13$ | $k=14$ | $k=15$ | $k=16$ <br> $=4^{*} 4$ | $k=17$ | $k=18$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $(2)(3)$ | $2^{3 *} 3^{2 *} 7$ | 0 | 3 | $(2)(2)$ | $\left(2^{5 *} 3^{*} 5\right)$ <br> $(2)$ | $(2)(2)$ | $(2)(2)$ <br> $(2)(2)$ | $\left(2^{3}\right)(2)$ |

## Stable values

Below is a table of the stable values for various $k$.
There is a factor of $5^{i}$ whenever $k+1$ has a factor of $5^{i-1}$ and is divisible by 8

| $k=1$ | $k=2$ | $k=3$ | $k=4$ | $k=5$ | $k=6$ | $k=7$ | $k=8$ <br> $=8$ | $k=9$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 2 | 2 | $2^{3 *} 3$ | 0 | 0 | 2 | $2^{4 *} 3^{*} 5$ | $(2)(2)$ | $(2)(2)(2)$ |

| $k=10$ | $k=11$ | $k=12$ | $k=13$ | $k=14$ | $k=15$ | $k=16$ <br> $=8^{*} 2$ | $k=17$ | $k=18$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $(2)(3)$ | $2^{3 *} 3^{2 *} 7$ | 0 | 3 | $(2)(2)$ | $\left(2^{5 *} 3^{*} 5\right)$ <br> $(2)$ | $(2)(2)$ | $(2)(2)$ <br> $(2)(2)$ | $\left(2^{3}\right)(2)$ |

## Stable values

Below is a table of the stable values for various $k$.
There is a factor of $7^{i}$ whenever $k+1$ has a factor of $7^{i-1}$ and is divisible by 12

| $k=1$ | $k=2$ | $k=3$ | $k=4$ | $k=5$ | $k=6$ | $k=7$ | $k=8$ | $k=9$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 2 | 2 | $2^{3 *} 3$ | 0 | 0 | 2 | $2^{4 *} 3^{*} 5$ | $(2)(2)$ | $(2)(2)(2)$ |

| $k=10$ | $k=11$ | $k=12$ <br> $=12$ | $k=13$ | $k=14$ | $k=15$ | $k=16$ | $k=17$ | $k=18$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $(2)(3)$ | $2^{3 *} 3^{2 *} 7$ | 0 | 3 | $(2)(2)$ | $\left(2^{5 *} 3^{*} 5\right)$ <br> $(2)$ | $(2)(2)$ | $(2)(2)$ <br> $(2)(2)$ | $\left(2^{3}\right)(2)$ |

## What's the pattern?

Note that:

$$
\begin{aligned}
& 4=2(3-1) \\
& 8=2(5-1) \\
& 12=2(7-1)
\end{aligned}
$$

In general, for $p$ a prime number, there is a factor of $p^{i}$ if $k+1$ has a factor of $p^{i-1}$ and is divisible by $2(p-1)$.

The prime 2 is a little different...
.....2(2-1) does not equal 4 !

## Beyond...

- It turns out that all of the stable values fit into patterns like the one I described.
- The next pattern is so complicated, it takes several pages to even describe.
- We don't even know the full patterns after this - we just know they exist!
- The hope is to relate all of these patterns to patterns in number theory.

## Some patterns for the prime 5
