2 Creation of a fixed text

Claude Gilliot

In the Islamic representation, the Qurʾan is the scripture containing the revelations ‘recited’ by Muḥammad and preserved in a fixed, written form. The majority view among Muslim authorities is that Qurʾan, an Arabic verbal noun, comes from qaraʿa, ‘to recite’, ‘to declaim’, ‘to read aloud’. Some Western scholars, however, think that it is derived from the Syriac qeryānā (reading, scripture, lectionary). That the origin of the word is not Arabic seems to be confirmed by the interpretation given by an ancient exegete of Jewish origin, Abū ʿUbayda (d. 209/824–5), who understands what could have been the first revelation delivered by Muḥammad: iqraʾ bi-smi rabbika (Q 96:1; which the majority of the exegetes understand as ‘Read/recite: in the name of your lord’), as ‘Proclaim/Call upon the name of your lord’ (cf. Hebrew: qra bshem adonai; Syriac: qrà b-shem māryā).

The status of the Qurʾan during Muḥammad’s lifetime

The Qurʾan and Muḥammad’s prophetic experience are very closely linked. Often the text responds explicitly to Muḥammad’s historical situation and even sometimes to his domestic problems. The Muslim theological position is that God is the speaker throughout the Qurʾan, Muḥammad the recipient, and the angel Gabriel the intermediary agent of the qurʾānic revelations. But in what seem to be the oldest parts of the Qurʾan, the speaker and the sources of revelation are not mentioned (Q 91:1–10); in some passages there is no indication referring to a deity as a source of the message (Q 103:1–3) and in others Muḥammad seems to be the speaker (Q 81:15–21). In the earliest passages where Muḥammad’s God is mentioned, he is spoken of in the third person, usually as ‘my lord’ or ‘your lord’ (Q 43:64; 96:1–8, etc.). According to some verses, Muḥammad himself had the vision of God (Q 53:11; 81:23). In the earliest passages that indicate the source of their revelation, God is the speaker (Q 73:5; 87:6). A number of late Meccan and
Medinan passages present God as reciting the verses, the Qurʾan and the book (kitab) to Muḥammad (e.g., Q 2:252; 3:108; 45:6).

But at the same period some passages have the effect of raising God from the action of direct revelation (Q 42:51–2); rather the revelation is ‘brought down’ by ‘the true spirit’ (26:192–3), or by ‘the spirit of holiness’ (Q 16:102). Because in an early Medinan verse (Q 2:97) the agent of revelation is said (for the first and only time) to be the angel Gabriel, Muslim exegetes have identified, on this basis and on that of traditions attributed to Muḥammad, the ‘spirit’ in the earlier passages as Gabriel.¹

Different chronologies of the sūras and of passages of the Qurʾan have been proposed by Muslim and Western scholars but both groups use the classification of Meccan and Medinan periods.² The different chronologies of Western scholarship are based on the style, vocabulary and content of the sūras and passages: first or early Meccan period, second or middle Meccan period, third or late Meccan period. As for the Medinan revelations, their chronological order is determined by the subject matter which reflects Muḥammad’s growing political power and the development of events in Medina.

There is a general consensus that either Q 96:1–5 or 74:1–7 represents the first proclamation of verses uttered by Muḥammad. As would be expected, the final passages were sought among Medinan sūras; for Muslim scholars these are Q 5, 9 or 110. Some pointed to other verses of the same period. It is probable that for a period, perhaps for years, Muḥammad and the first Muslims retained the passages delivered to him only in their memories. It also seems, however, that over time much of the Qurʾan was written down in some form during his lifetime.

But the problems involved in this matter are of great complexity. The later apologists of Islam, who were challenged by Christians and others to credit Muḥammad with a miracle that could authenticate his claim to prophethood, asserted that the Qurʾan itself was a miracle.³ One of the points they made was that Muḥammad could neither read nor write. Not all Western scholars agree with this assessment.⁴ Mecca was in regular communication with regions where writing was commonly used, particularly with the town of al-Ḥira, and it is said that Meccans had learned writing from al-Ḥira and al-Anbār. Companions, informants or close relations of Muḥammad, like Waraqa b. Nawfal, the cousin of his first wife, Khadija, could read and/or write. For instance, the secretary of Muḥammad, Zayd b. Thābit, had been a pupil in the Jewish school of Medina.

Both memory and writing have been the modes of conservation of the revelations delivered by Muḥammad. After Muḥammad went to Medina,
his employment of secretaries is attested. Among the names which are mentioned in this office are: ‘Uthmān, Mu‘āwiya b. Abī Sufyān (d. 60/680), Ubayy b. Ka‘b, (the Jew) Zayd b. Thabit and ‘Abdallāh b. Abī Sarh. The problem is that these revelations were not always invariant. After having been revealed, some of them were ‘raised’, that is ‘suppressed’ or ‘abrogated’ (by God, according to Muslim reports), probably as a consequence of the evolution of Muḥammad’s ideas and needs. So it is difficult to speak of a ‘fixed text’ during his lifetime.

The fact that the Qur’ān contains words which are not of Arabic origin provides an indication that Jewish and Christian scriptures, the latter probably in Syriac, were known in both Mecca and Medina. Some of the technical terms found in connection with the word qur’ān (itself of non-Arabic origin) do not derive from Arabic. Among these are āya (sign, miracle, verse), related to Hebrew ēth and Syriac āthā (sign), and sūra (chapter of the Qur’ān), which seems to be derived from the Syriac sūrtā. All these matters and others argue for the pre-history of the Qur’ān – what I have elsewhere called ‘the reconstruction of the Qur’ān uphill’ – which can be deduced from a critical reading of the Muslim reports themselves.

Another problem is that of the language and style of the Qur’ān. In the qur’ānic text, collocation of the term ‘qur’ān’ with the adjective ‘arabī (‘Arabic’, Q 12:2; 20:113; 39:28, etc.) as well as other elements, such as the doctrine of the ‘inimitability’ of the Qur’ān involving a special interpretation of the ‘challenge verses’ (Q 2:23; 10:38; 11:13, etc.), have led to the Islamic conceptualisation of a lingua sacra. Briefly put, this is the belief that Arabic is the best of tongues and that the Arabic of the Qur’ān is flawless and unmatchable. It seems that when the Quraysh heard some utterances of Muḥammad delivered as Qur’ān, they were not particularly impressed. Some of them accused him of using human informants before delivering his ‘divine’ message. The answer of the Qur’ān was: ‘And we know that they say: Only a man teaches him. The speech (lisān) of whom they falsely hint is outlandish, and this is clear (mubīn) Arabic speech’ (Q 16:103). But this usual translation is misleading, because mubīn is the active participle of a causative-factitive, meaning ‘making clear’. It was interpreted, however, by the Islamic theologians and philologists as ‘clear Arabic’, and, by extension, ‘pure’ and ‘best’, ‘the best of all languages’, that of the Quraysh, Muḥammad’s tribe. This then led to mythical narratives about the superiority of Arabic, all in support of the idea that the Arabic of the Qur’ān is an exalted language, a lingua sacra.

Some Western scholars have drawn attention to the importance of the Aramaic or Syriac substratum in the formation of the Qur’ān, and recently
notice has been taken of the relation of some passages of the Qur’ān to the Diatessaron of Tatian. This has given new impulse to the study of the possible informants of Muḥammad and to investigation of peculiarities and oddities in the language and style of the Qur’ān.

THE COLLECTIONS, REDACTION AND TEXTUAL HISTORY OF THE QUR’ĀN AFTER THE DEATH OF MUḤAMMAD

The collection(s) of the Qur’ān

The consensus of the Islamic tradition asserts that the Qur’ān was not collected during the life of the Prophet, although it is said that copies of various suras were available during his lifetime. According to a widespread report with many variants, at the time of Muḥammad’s death, the Qur’ān was written only upon leafless palm-branches and stumps of palm-branches, or other material support such as the shoulder-blades of camels, ribs of animals, white or flat stones, pieces of cloth or of skin, or papyrus, or wooden boards, etc. Numerous narratives relate that the text was collected from these materials as well as ‘from the hearts of men’. But the scenario faces at least two problems: one of them has to do with terminology, the other with the collection of the text.

For classical Muslim scholars, the Arabic verb jama‘a, a term commonly found in these narratives, means not only to collect, but also to know by heart or ‘to remember the whole of the Qur’ān’. For example, it is said that ‘Six persons memorised (jama‘a) the Qur’ān during the life of the messenger of God: Ubayy b. Ka‘b, Abū l-Dardā‘, Zayd b. Thabit, Sa‘d b. ‘Ubayd and Abū Zayd’, but occasionally some names on the list are different, people do not know with certainty who Abū Zayd really was, and the name of the sixth one has been forgotten!

The Baghdādi Mu‘tazī Abū l-Qasim al-Balkhī (al-Ka‘bī, d. 319/931) noted a contradiction between this report and another one: ‘Nobody has collected (or memorised, jama‘a) the Qur’ān during the life of the Prophet.’ So great was the embarrassment of the Muslim scholars in the face of such traditions that the Ash‘ari theologian al-Baqillānī (d. 403/1013) was compelled to distinguish among seven meanings of the verb jama‘a in order to remove the ambiguity and find a solution that could accord with the thesis of the collection of the Qur’ān by Abū Bakr and ‘Uthman. These two names signal the collection stories to be found in traditional Muslim sources. Two collections are usually mentioned, sometimes three.
A ‘first’ collection is said to have taken place under the reign of the first caliph, Abū Bakr (r. 632–4).ʿUmar b. al-Khaṭṭāb (who was to succeed him as caliph in 634) became anxious when many of the reciters/readers of the Qurʾān were killed during the Battle of Yamāma in 633. Fearing that large portions of it would be irretrievably lost, he counselled Abū Bakr to make a collection of the text. At first Abū Bakr hesitated to do something that had not been done under the authority of Muḥammad. But in the end he accepted this responsibility and commissioned Zayd b. Thābit, who had been one of the secretaries of Muḥammad in Medina. The latter then proceeded to collect the Qurʾān from the materials mentioned above and he wrote it on sheets. He gave these to Abū Bakr; after the latter’s death they passed to ʿUmar, and on ʿUmar’s death to his daughter Ḥafṣa, one of the widows of Muḥammad.

Another collection occurred some twenty years later, during the caliphate of ʿUthmān, when dissensions among followers of other ‘collections’ induced the caliph to make an official collection of the Qurʾān. We are told, among other things, that during expeditions against Armenia and Azerbaijan, disputes concerning the reading of the Qurʾān arose among the troops, and the general Ḥudhayfa b. al-Yamān laid the matter before the caliph and urged him to take steps to put an end to the differences. After having taken counsel with senior Companions of Muḥammad, ʿUthmān commissioned the Medinan Zayd b. Thābit to collect the Qurʾān, associating with him three members of noble Meccan families: Abdallāh b. al-Zubayr, Saʿīd b. al-ʿĀṣ and ʿAbd al-Raḥmān b. Thābit. Saʿīd b. al-ʿĀṣ was regarded as an expert in the Arabic language; he and the two other Meccan redactors were chosen because they belonged to the Quraysh tribe of Mecca, which was the tribe of Muḥammad. ʿUthmān borrowed from Ḥafṣa the copy made under the direction of Abū Bakr, and on its basis requested that a standard codex be written out in the ‘pure’ dialect of Quraysh. He wanted the standardised Qurʾān to be preserved in the Quraysh dialect in which it was supposed to have been delivered to Muḥammad. According to some reports, if these three Meccan collaborators were to differ with Zayd’s reading or choice at any point, the disputed passage had to be corrected and rewritten in the ‘original’ dialect.

ʿUthmān ordered that the other codices should be burned or destroyed and that the ‘codex of Zayd’ (‘Uthmanic codex’) alone should be preserved (in Medina) and copies made to be sent to each of the main centres of the empire: Mecca, Basra, Kufa and Damascus. The order of ʿUthman was executed everywhere, save in Kūfa where the great Companion of Muḥammad, Abdallāh b. Maṣʿūd and his partisans, refused it.
The problem for later scholars was to assure Muslims that there was an absolute continuity between what had been delivered to Muḥammad and this “ʿUthmānic codex”. The expression “ʿUthmānic codex” or ‘codex of ʿUthmān’ that is being used here can be considered a convention, for two reasons. First of all, because the misadventures detailed about the transmission and codification of the Qurʾān – as both orally delivered and transmitted in writing – are so great, the ancient Muslim narratives on these subjects offer no real clarity about what “ʿUthmānic codex’ means. Secondly, even if Muslims believe that the Qurʾān we have now is the “ʿUthmānic codex’, our analysis of Muslim narratives on the matter does not leave us with the same certainty.\(^{13}\)

Some Muslim scholars, like al-Ḥākim al-Naysābūrī (d. 405/1014), suggest that the Qurʾān was collected three times. The first time was by Muhammad, basing this interpretation on the report of Zayd b. Thābit that stated, ‘We used to compose (nuʾallīf) the Qurʾān from the leaves . . .’, in the following way: ‘Muḥammad used to say that this verse should be put in this sūra.’ The second time was under Abū Bakr, but not in a definitive codex. The third time was under ʿUthmān in a ‘definitive single’ codex.

Occasionally other collections of the Qurʾān are also mentioned, for instance that of Sālim, an emancipated slave of the Companion Abū Ḥudhayfa, who was ‘the first one to collect the Qurʾān in a codex’, that is (in Arabic) a musḥaf, a word he had learnt from the Ethiopians. Eventually, also ‘Alī b. Abī Ṭalīb, the Prophet’s son-in-law and the fourth caliph, is sometimes credited with having collected it.

The codices of the Companions and the variant readings

ʿUthmān’s effort to obtain uniformity in the qurʾānic texts may, on the whole, have been successful, but in practice other readings were by no means forgotten. Most of the larger qurʾānic commentaries, such as those of al-Ṭabarī (d. 310/923),\(^{14}\) Ibn al-Jawzī (d. 597/1200) and Abu Ḥayyān al-Andalūsī (d. 745/1344), refer to such ‘non-canonical’ readings, and a great number of special books were written on that subject. The presumption is that at an early period Companions or other Muslims began to write down as much as they could of the Qurʾān, but in a society where people were accustomed to the dominance of oral tradition some of them feared that these codices might be ‘incomplete’. It is perhaps the reason why the phrase used by some Companions, ‘to collect the Qurʾān’, was interpreted by various commentators as ‘to memorise the Qurʾān’.

On the basis of the Book of the codices of Ibn Abī Dāwūd al-Sijistānī (d. 316/929), which he edited, and on other sources Arthur Jeffery has
distinguished between two categories of codices: fifteen ‘primary codices’ of the Companions and thirteen ‘secondary codices’ attributed to Muslims of the second generation. In the course of time, however, some of the written collections pertaining to the ‘primary codices’ secured special authority in various centres of the Islamic world: that of one of the close Companions of Muḥammad, ‘Abdallah b. Maṣʿūd (d. 33/653) in Kufa, that of Ubayy b. Kaʻb (d. 18/639, or 29/649) in Syria, and that of Abū Muṣʿa l-Ashʿarī (d. 42/662 or later) in Başra. There exist no copies of these early codices, either primary or secondary, but some of their features and variants are known through later sources like qur’ānic commentaries, as noted above, and special works. The codex of Ibn Maṣʿud seems to have been different from that of ‘Uthmān in several points: it did not include the first sūra, and appears to have contained many ‘synonymic variants’, etc. The codex of Ubayy seems to have been less important. Its best-known peculiarity is that it contained two short sūras which are not in the codex of ‘Uthmān, nor in that of Ibn Maṣʿūd.

The process of the establishment of a canonical text did not end with the supposed ‘Uthmanic codex. First, the copies of the ‘Uthmanic model-codex (al-imām) that were sent to the metropolitan centres of Islam appear not to have been identical. Some of them may have contained mistakes, as the following tradition suggests: ‘When the codices were written, they were submitted to ‘Uthmān, who noted several incorrect words (or passages), and he said: “Do not change them, the Arabs will change them”, in other versions, “They will change them with their tongues”, or “The Arabs will pronounce them correctly”.

There was also another big problem, the deficiencies of the Arabic script. In the first century and even later, Arabic was written in a scriptio defectiva, i.e., without vowels or diacritical points, these last permitting the suppression of the ambiguity of most Arabic consonants (of the twenty-eight consonants of the Arabic alphabet, only six are not ambiguous). So, for example, there was one shape to express b, t, th, and in the beginning and middle of words n, y (or i); then d and dh (interdental spirant); emphatic t and emphatic z; ‘(laryngeal fricative) and gh (uvular r, or r of the Parisians); f and q (glottal occlusive). Additionally, the short vowels were not marked, nor were the long ones consistently indicated. Although the reader who was familiar with the language would, in most cases, have no difficulty ascertaining which pronunciation was intended, there were so many words which permitted quite different vocalisations that instances of dubious pronunciation were not infrequent. There was also a permissible variance in grammatical forms which had not, as yet, been greatly restricted.
It is hardly possible that the *scriptio plena* would have been introduced all at once by the grammarian Abū l-Aswad al-Duʿāli (d. 69/688), as is sometimes suggested. But it is possible that the impetus came from scholars of Baṣra with a method apparently copied from that used in Syriac texts: dots or strokes were used to mark readings. Al-Ḥajjāj b. Yūsuf (d. 95/714) is generally credited with having improved the orthography of ʿUthmān’s codex during the reign of the Umayyad caliph ʿAbd al-Malik (r. 65–86/685–705), probably during the period of al-Ḥajjāj’s governorship of Iraq (75–95/694–714). The process probably continued to evolve even after the time of al-Ḥajjāj, considering the range of issues that had to be dealt with: distinguishing between consonants with a similar shape, marking of long vowels, marking of short vowels, as well as certain other matters, such as the doubling of consonants, etc.

The evidence of early copies of the Qurʾān that have survived, such as the Arabic manuscript 328 (a) (Fig. 2) of the National Library in Paris (end of the seventh century CE; in which a space was left between the sūras but the titles do not appear), or the manuscript Or. 2165 (Fig. 3) of the British Library (probably second/eighth century; in which the titles of the sūras were added later with a deliberately different calligraphic style),16 show that for some considerable time the new system was used sparingly and mainly in connection with variants.

Chronologically, several periods can be distinguished in the acceptance of the qurʾānic readings/variants, as discussed below.17

*Before the general acceptance of the ʿUthmānic codex*

The introduction of the ʿUthmānic ductus, with unmarked consonantal structure, does not seem to have had an immediate and decisive effect on the limitation of variant readings. On the whole, it appears that in the second/eighth century *variae lectiones* with a different ductus, especially from Ibn Maṣʿūd’s codex, were still freely discussed and were called *qirāʿat* (readings), and sometimes *hurūf* (manners of speaking/writing). Both words were apparently used interchangeably for ʿUthmānic and non-ʿUthmānic readings, as F. Leemhuis has shown in his study of the qurʾānic commentaries of the Kufans Sufyān al-Thawrī (d. 161/778) and al-Farrāʾ (d. 207/822), and the Yemeni ʿAbd al-Razzāq (d. 211/827).18 Particularly the treatment by al-Farrāʾ of the variant readings from Ibn Maṣʿūd shows that in his time they could be discussed in equal terms with the ʿUthmānic text. The guiding principle was that these readings should be well known, either from a codex or from a well-established tradition. Another criterion for accepting a variant reading was that it should be in accordance with the rules of the Arabic language.
The ´Uthmānic codex itself still left room for different readings. As seen above, the codices of Medina, Mecca, Damascus, Kūfa and Başra are said to have presented slight differences in some places. At this time, however, the discussion of which was the primary text, the codified or the recited, also played a major role in the evolution of the history of the gradual acceptance of the ´Uthmānic codex as the exclusive authority.

This appears in a different treatment of the variae lectiones in the works identically entitled The good significations of the Qurʾan (Maʿāni l-Qurʾān) by al-Akhfash al-Awsat (d. 215/830) and by al-Farrāʾ. The latter, reflecting the grammatical tradition of Kūfa (home to Ibn Masʿūd’s codex!) treats more variae lectiones that presuppose a different shape or ductus than the former. Unlike al-Farrāʾ, al-Akhfash’s criterion is that such readings, which must be in good Arabic, should also be in accordance with the ´Uthmānic codex to be accepted.

After the general acceptance of the ´Uthmānic codex

Two generations later, the principle expressed by the traditionist, theologian and literary figure Ibn Qutayba (d. 276/889), was the following: ‘All of them [qurʾānic readings] which are in accordance with our codex [i.e., the ´Uthmānic codex], not departing from its writing, we are allowed to use in the recitation.’ It should be noted that this period is characterised by a codification in nearly all fields: grammar, poetry, literature, criteria for accepting the prophetic traditions, exegesis, jurisprudence, theology, etc. A shift towards the consolidation, standardisation and canonisation of concepts and doctrines was manifest. The same Ibn Qutayba, for instance, wrote a book entitled On poetry and poets, in the introduction to which he stipulated the rules of the Arabic poem (qaṣīda), another one on The interpretation of the differences in hadith (prophetic traditions) and a third on the Interpretation of difficult qurʾānic passages, codifying in both of these latter works the principles of interpretation for their respective subject fields. This evolution corresponds politically with the ‘imperial period’ (Fr. moment impérial).

At the end of the third/ninth century, for the exegete al-Ṭabarī (d. 310/923) the criterion for accepting a reading was whether it was in accordance with the codices of the five cities to which copies of the ´Uthmānic codex, i.e., their consonantal ductus, had been sent.19 Of course, he also has other criteria: linguistic, ‘sound transmission’, reading accepted by the ‘majority’ of the great readers, etc., but the definitive criterion is that of accordance with the ductus of the ‘codices of the Muslims’.
This evolution corresponds to a time in which only readings based on the ‘Uthmanic codex were accepted for liturgical use, a development illustrated by the activities of a traditionist (specialist in the transmission of the traditions of the Prophet and of the first generations of Muslims) and qur’anic reader Ibn Mujahid (d. 324/936). A reader of Baghdad, Ibn Shanabudh (d. 328/939), who in public worship had recited readings of Ibn Mas‘ud, Ubayy and others, was brought to trial and flogged in 323/935 for reciting qur’anic words or passages ‘in irregular readings at variance with the consensus’. Clearly, there was a shift in the meaning of qirā’a (reading) from ‘manner of reciting the Qur’an’ to ‘manner of reciting the established written text in accordance with the ‘Uthmanic ductus of the Qur’an’. Another Baghdadī reader, also a traditionist and grammarian, Ibn Miqsam (d. 354/965), is credited with three versions of a book on the seven readings. Like Ibn Mujahid, he seems to have accepted the principle of limiting variants. But unlike him, he advocated complete freedom to vowel the received consonantal ductus in any fashion consistent with Kufan grammar. This was seen as ‘submitting the Qur’an to grammar’. At the instigation of Ibn Mujahid, he was tried before judges and witnesses (notaries), and made to recant on threat of chastisement.

Before Ibn Mujahid, others had tried to ‘restrain’ (this is the interpretation of most Orientalists nowadays) the number of accepted reading ‘systems’ – as, for example, did Ah̨mad b. Jubayr al-Kufī (d. 258/871) who had composed a book on five acceptable readings, one for each city to which ‘Uthman had remanded a codex. This is the reason why some modern scholars see the enterprise of Ibn Mujahid less as an attempt to arrest the proliferation of readings, than as a struggle against too much independence for the grammarians who were expected to limit themselves to materials ‘which had enjoyed a high level of recognition and successive transmission (tawātur)’.

In any event, Ibn Mujahid’s work had an enormous influence, and in the course of time a general consensus emerged that recognised the recensions of two transmitters of each of the seven readings as authoritative. Medina: (1) Nafi‘ (d. 169/785), in the transmissions of Warsh (d. 197/813) and Qalūn (d. 220/835). Mecca: (2) Ibn Kathir (d. 120/738), in the transmissions of al-Bazzī (d. 250/864) and Qunbul (d. 291/904). Damascus: (3) Ibn Ṭamīr (d. 118/736), in the transmissions of Hishām b. Ammar (d. 245/859) and Ibn Dhakwān (Abū Ṭamīr, d. 242/857). Baṣra: (4) Abū Ṭamīr b. al-‘Alā‘ (d. 154/771), in the transmissions of al-Durī (Ḥafṣ b. ‘Umar, d. 246/860) and al-Sūsī (Ṣāliḥ b. Ziyād, d. 261/874). Kūfa, with three authorities: (5) ‘Āṣim (d. end 127 or early 128/745) in the transmissions of Ḥafṣ b. Sulaymān (d. 180/796) and
Ibn ‘Ayyāsh (d. 193/809); (6) Ḥamza b. Ḥabīb (d. 156/773 or 158/775), in the transmissions of Khalaf (b. Hishām al-Bazzār, d. 229/844) and Khalład (d. 220/835); (7) al-Kisā’i (d. 189/805), in the transmissions of al-Dūrī and Abū l-Ḥarīth al-Layth (d. 240/854). The reason why Ibn Mujāhid chose seven readers is not clear. It may be because they met the criterion of broad authentication. But it is also possible that this number suggested that these were the ‘seven aḥruf’ (manners of reciting?) in which, according to a tradition attributed to Muḥammad,22 the Qur’ān is said to have been revealed. This equivalency, however, was never universally accepted by the Muslim scholars.

Muslim scholars found that other famous readers met the same criterion of acceptance. Three became known as ‘the three after the seven’, and books were composed on the ‘ten readers’, for instance that by the grammarian of Nishapur, Ibn Mihrān (Abū Bakr Ahmad b. al-Ḥusayn, d. 381/991), who wrote three books on the ten readings: *The outmost, The comprehensive* and *The extensive* (a commentary on *The comprehensive*). The most frequently cited nowadays is *The unfolding on the ten readings* of Ibn al-Jazārī (d. 833/1429) which can be found on the curricular syllabi of most Islamic faculties, along with its commentaries. These three readings, also with two transmitters each, are the readings of: (8) Abū Ja’far Yazīd b. al-Qaṣī (d. 130/747, Medina), (9) Ya’qūb al-Ḥaḍrami (d. 205/821, Baṣra) and (10) Khalaf (the same as Ḥamza’s first transmitter; Kufa).

Further developments on this topic produced three kinds of readings distinguished by the Andalusian grammarian and reader Makki b. Abī Ṭalīb al-Qaysī (d. 437/1045):

1. The readings which are ‘recited nowadays in which three characteristics are united’: (a) transmission from Muḥammad according to reliable authorities; (b) accordance with the Arabic in which the Qur’ān was revealed; (c) conformity with the ductus of the codex. Readings which join these three features are accepted and their reciting is allowed.

2. Those which meet the two first criteria, but lack the third. They are acceptable, but cannot be used in recitation, although a minority held the view that it was permissible to recite them in the prayer.

3. Those which lack either one or both of the two first criteria. They are unacceptable, even if they are in accordance with the ductus of the codex.

From this evolution in the formulation of criteria, it became clear for certain Islamic scholars that conformity with the ‘Uthmānic ductus was in itself sufficient for a consensus on the acceptability of readings, and this
made room for the acceptance of yet other readings, i.e., ‘the four after the ten’, or the system of the fourteen readings. Its adherents based their judgements on the opinions of Makkīb Abī Ṭalīb al-Qaysi and Ibn al-Jazari, but the majority of the authorities considered these four readings to be anomalous (*shādhda*). These four readers are (also with two transmitters each, who are not given here): (11) Ibn Muḥaysīn (d. 123/740, Mecca), (12) al-Yazīdī (Yaḥyā, d. 202/817, Baṣra), (13) al-Ḥasan al-Baṣrī (d. 110/728, Baṣra), (14) al-Aʿmash (Sulaymān b. Mihrān, d. 148/765, Kūfā).23

For the Muslim scholars, the variants which are not accepted in the recitation and in the prayer can be used in exegesis, i.e., to make some interpretations of the text clearer. In order to achieve some theoretical clarity on the question of variant readings, the following categorisation has been proposed recently: (1) ‘the small variation’ (various readings of the same ductus); and (2) ‘the great variation’ (variations of the ductus, i.e., non-‘Uthmānic’ codex), on the one hand; and (3) ‘a greater variation’ (an Arabic/Aramaic transliteration of the ductus; in some cases a quasi-palimpsest24), on the other hand.25

With the passing of time, and because of a pressure for uniformity and/or because of political evolutions, the majority of the different transmissions of variants dropped into disuse for the recitation. Only some remain, e.g.: al-Dūrī’s transmission of Abū Ṭamir’s reading (Sudan), Warsh’s transmission of the reading of Nāfī’ (now confined to the Maghrib or some African regions under the influence of the Mālikī school of law), and Ḥafṣ’s transmission of ‘Āṣim’s reading. This latter has been the basis of the standard Egyptian text of the Qurʾān, first published in 1923, which greatly advantaged the spread of this reading. But the study of all the other readings is still pursued in special studies on grammar and on the Qurʾān, and dedicated works and commentaries devoted, in particular, to the seven, but also to the ten or fourteen readings, are part of the curricula of many faculties of Islamic law and theology. Two dictionaries of the qurʾānic readings which are taken from the numerous special books on readings and from the qurʾānic commentaries have been recently published.26

**QUESTIONS AND PERSPECTIVES**

No critical edition of the Qurʾān which could be a basis for its scholarly reconstruction has ever been produced. Two types of reconstruction of this text or ‘lexiconary’ (qurʾān) are conceivable: deductive and inductive. The deductive reconstruction would resemble the German project led by G. Bergsträtser (d. 1933) and O. Pretzl (d. 1941). After some initial hesitations, they decided that the ‘Uthmānic codex should be the basis of such a
creation of a fixed text 53

Critical edition but only the consonantal skeleton of that codex. But since this codex had been edited in Cairo in 1923 (with the points on or under the ambiguous consonants and with the vocalisation), Bergsträßer finally thought that such a new edition was no longer necessary, and that it would be sufficient to establish an *apparatus criticus* (based on the Islamic literature on variant readings, and in accordance with the ‘Uthmanic consonantal duc-
tus) for the Cairo edition. After the death of O. Pretzl, however, this project was never realised.

At the same time, the American scholar Arthur Jeffery had another project. For him, the task of preparing a critical edition of the Qur’an was twofold: ‘First that of presenting some form of tradition as for the text itself, and secondly that of collecting and arranging all the information scattered over the whole domain of Arabic literature, concerning the variant readings both canonical and uncanonical.’ Jeffery published the variant readings he had collected in his *Materials for the history of the text of the Qur’an*. He also began to collaborate with the German project, but this enterprise, as mentioned above, did not result in a critical edition of the Qur’an. Although it has been stated that the material collected by the two German scholars (c. 15,000 photographs of ancient manuscripts of the Qur’an and material on variant readings) perished in the bomb attacks on Munich in the last months of World War II, it is also possible that it still exists somewhere in Munich or more probably in Berlin.

As for the inductive reconstruction, many Islamic traditions on the history of the Qur’an have been interpreted by some Western scholars as hints of a ‘concealed’ history of the text before and during the revelations delivered to Muḥammad. Examples are the reports on the informants of Muḥammad to whom the Qur’an alludes (Q 25:4–5; 16:103). The possibility should not be excluded that whole sections of the Meccan Qur’an could con-
tain elements originally established by, or within, a group of ‘God-seekers’ who possessed either biblical or post-biblical or other information. This possibility was reinforced recently by the study of Christoph Luxenberg on the Syro-Aramaic reading of the Qur’an and by the article of Jan van Reeth, both mentioned above. On this basis, the hypothesis has been expressed recently that the Qur’an could be partly the product of a group.

Notes
