

**M20550 Calculus III Tutorial**  
**Worksheet 11**

1. Compute the surface integral  $\iint_S (x + y + z) \, dS$ , where  $S$  is a surface given by  $\mathbf{r}(u, v) = \langle u + v, u - v, 1 + 2u + v \rangle$  and  $0 \leq u \leq 2$ ,  $0 \leq v \leq 1$ .
2. Let  $S$  be the portion of the graph  $z = 4 - 2x^2 - 3y^2$  that lies over the region in the  $xy$ -plane bounded by  $x = 0$ ,  $y = 0$ , and  $x + y = 1$ . Write the integral that computes  $\iint_S (x^2 + y^2 + z) \, dS$ .
3. Compute  $\iint_S \mathbf{F} \cdot d\mathbf{S}$ , where  $\mathbf{F} = y\mathbf{i} - x\mathbf{j} + z\mathbf{k}$  and  $S$  is a surface given by
 
$$x = 2u, \quad y = 2v, \quad z = 5 - u^2 - v^2,$$
 where  $u^2 + v^2 \leq 1$ .  $S$  has downward orientation.
4. Compute the flux of the vector field  $\mathbf{F} = x\mathbf{i} + y\mathbf{j} + z\mathbf{k}$  over the part of the cylinder  $x^2 + y^2 = 4$  that lies between the planes  $z = 0$  and  $z = 2$  with normal pointing away from the origin.
5. Let  $S$  be the surface defined as  $z = 4 - 4x^2 - y^2$  with  $z \geq 0$  and oriented upward. Let  $\mathbf{F} = \langle x - y, x + y, ze^{xy} \rangle$ . Compute  $\iint_S (\nabla \times \mathbf{F}) \cdot d\mathbf{S}$ . (*Hint*: use one of the theorems you learned in class.)
6. Evaluate  $\int_C (x^4 y^5 - 2y)dx + (3x + x^5 y^4)dy$  where  $C$  is the curve below and  $C$  is oriented in clockwise direction.

7. Let  $S$  be the boundary surface of the region bounded by  $z = \sqrt{36 - x^2 - y^2}$  and  $z = 0$ , with outward orientation. Find  $\iint_S \mathbf{F} \cdot d\mathbf{S}$ , where  $\mathbf{F} = x\mathbf{i} + y^2\mathbf{j} - 2yz\mathbf{k}$ .

8. (*A Challenging Problem*) Evaluate

$$\int_C (y^3 + \cos x)dx + (\sin y + z^2)dy + x dz$$

where  $C$  is the closed curve parametrized by  $\mathbf{r}(t) = \langle \cos t, \sin t, \sin 2t \rangle$  with counter-clockwise direction when viewed from above. (*Hint*: the curve  $C$  lies on the surface  $z = 2xy$ .)
