ECON 30331
Econometrics
Department of Economics
University of Notre Dame

Fall 2014
MW 8:00am – 9:15pm
Classroom: 141 DeBartolo

Bill Evans
Office: 913 Flanner
Phone: 574-631-7039
Email: wevans1@nd.edu

Class web page:  http://www.nd.edu/~wevans1/econ30331.htm

Textbook:

Along with this book, I will assign mandatory readings of academic articles. The readings are available for download in PDF format from the class web page. To comply with copyright laws, the web page is password protected and your NetId/password will provide you access to the articles.

Office Hours: Monday 3:00pm – 4:45pm, Tuesdays 2:00pm-4:00pm, and by appointment.

I am never far from email. If you have a question, please feel free to contact me at wevans1@nd.edu.

I do a lot of traveling as part of my job as department chair and my work with LEO. Some weeks we have to move office hours to Wednesday and Thursday. I will give you enough advanced warning so you can plan accordingly.

Course rationale, objective and theme:
What separates economics from most other social sciences is that our discipline begins with a few basic assumptions and utilizes these as building blocks for models of behavior. Models are only useful if they can be tested and economists have developed a large toolkit of statistical models that are used to test these theories. The workhorse statistical model in the social sciences is the ordinary least squares (OLS) regression. The bulk of the course will be spent outlining the theory behind and the properties of the OLS model. The course will however not just be an abstract exercise. For each topic, I will first present a standard textbook treatment of the topic. Next, we will read some academic papers that used the techniques outlined in class. Students will be expected to read the assigned papers and be able to discuss not only the econometric techniques used but also the economic issues as well. Finally, I will provide sample code that illustrates how one would obtain estimates given appropriate data.

Statistical software
The class will use the STATA statistical software package. STATA is a fast and versatile program that was written by economists so it is more intuitive for people in our field. STATA is also the program of choice for applied micro economists. Knowledge of STATA will greatly enhance your ability to get a job after graduation.
STATA is available in all Windows-based machines in computer clusters and classrooms on campus. STATA is not available on the MAC machines in the clusters. If you want your own copy of STATA, a one-year site license for STATA 13/IC can be purchased through the STATA Grad Purchase plan. The web site is [http://www.stata.com/order/new/edu/gradplans/campus-gradplan/] and the cost is $98 for a one-year license or $69 for a six-month license. This version of STATA is available for either Windows or MAC platforms. This is not required for class but if you want to use STATA on your own laptop/desktop, this is the only avenue available.

We are also experimenting with using STATA on a virtual machine. Students with an internet connection can log onto a machine from anywhere with a valid NetID and use STATA remotely. Only 10 students can use this at any time but it will allow you use STATA just about anywhere. Login information about the virtual machine can be found at [http://www3.nd.edu/~wevans1/econ30331/Citrix%20Tutorial.pdf].

Steve Marks of the Campus OIT office will have a session on Wednesday, September 3, 2014 from 3:30-4:30 in Flanner 424 for anyone needing help setting up the virtual STATA on their laptop.

To help you get started with STATA, I have put together a 20-page tutorial that is available on the class web page. You are expected to go through the tutorial yourself and become familiar with the basics of STATA. You need to do this soon because we will begin to use STATA early on in the semester. I will run a 75 minute ‘get to know’ STATA session for anyone interested. The class is not required and if you ‘pick up’ programming quickly, you may want to skip it. The STATA review session is scheduled for Friday, August 29th, 8:00am – 9:15am in Room 136 DeBartolo.

I have programmed in STATA for years so if you have any question, please let me know. One note – in order to help you with your programming, I need to see the code. Therefore, copy the code you are working and email the text. Too many people come to my office and say “I typed what was in the handout and it did not work” then don’t show me their code. I need to see what you are doing before I can help.

The university recently hired and Economics Librarian. His name is James Ng and he has a PhD in economics. One of his tasks is to be a resource for undergraduates engaged in research. James can assistant you in any aspect of your STATA programming. James is also available to answer you data and STATA questions during his office hours, which are 3pm – 5pm on Wednesdays afternoons. James’s office is 1202B Hesburgh Library and his email is james_ng@nd.edu.

**Prerequisites:** ECON 30330 or a serious course in Mathematical Statistics. You are also expected to know some simple calculus.

I have put together a 20 page review of ECON 30330 and this is available on the class web page. This handout goes over most of the important concepts that will be used this semester such as expected values, covariance, correlation, linear combinations of random variables, test of hypothesis, testing the equality of means from two samples, etc. Please read over the handout. If the terms in that handout are foreign to you, you may need to review your ECON 30330 notes.
**Expectations:** Students are expected to attend class, bring their name card, be prepared for class, to NOT be late to class, to participate in classroom discussions, to hand in assignments when due, and to NOT engage in academic dishonesty.

**Evaluations:** Grades for the course will be based on problem sets (25 percent of the course grade), a midterm examination (25 percent), an empirical project (20 percent) and a comprehensive final exam (30 percent).

*Problem sets:* Seven or eight problem sets will be assigned during the semester. These problem sets are designed to gauge your understanding of the concepts discussed in class. The problem sets will have two types of questions. The first are ‘pencil to paper’ where you are asked to prove a mathematical statement, calculate an estimate, derive an equation, etc. These questions are the type that will be asked on the exams. For the second type of question, you will given a data set and asked to generate and interpret statistical output. You can use any statistical software package to answer these questions but I will provide sample programs and support (i.e., I will answer questions) for STATA.

You are encouraged to work in groups on the problem sets but everyone must turn in their own copy of the answers. Problem set answers should be turned in at the beginning of class on the day they are due. I will not accept late problem sets.

The first problem is on the class web page now and is due next Wednesday, September 3rd. This problem set covers the statistical concepts you should have learned in ECON 30330.

**Examinations:** The mid-term examination will be held Wednesday, October 15th, which is the Wednesday before Fall break. The final exam will be held in the regular classroom on Friday, December 19th, from 8:00m-10:00am.

Exams will be a mix of problems like those from the problem sets, and discussion-type questions.

Makeup exams will only be given for students who have a valid University excuse, applied for in writing and adequately documented. I must receive documentation within 48 hours of the missed exam. Please familiarize yourself with student responsibilities concerning missed exams, missed assignments, etc.

**No excuse weight transfer between midterm and final:** Everyone has bad days – people get sick, they break up with their boyfriend or girlfriend, they get turned down for a job, etc. These exogenous shocks will for some adversely impact test performance. In most classes, since there are few exams, problems occur when bad days happen on test day. Once midterm grades are returned, if you had a “bad day” you can sign a contract with me that that reduces the weight of your first exam by up to 10 percentage points (reduces it to a minimum of 15% of the course grade) and increases the weight of the final by up to 10 percentage points (increases it to a maximum of 40% of the course grade). The contract cannot be rescinded once you take the final. You cannot bargain for more points to be transferred. You cannot transfer point ex post from the final to the midterm.

**Paper:** A group research project is due Tuesday, December 9th. More information about the project will be given later in the semester but in a nutshell, I will provide you will a data set and a fairly narrow research question and you will be expected to review the relevant literature,
estimate models to answer the particular question, and write up the results as if this were an academic paper. The assignment will be distributed Monday, October 6\textsuperscript{th}. You will work in groups of three and you must identify your group by Monday, October 27\textsuperscript{th}. If you cannot find a group, I will assign you one. It is assumed that if your name is one the paper, you made significant contribution to the project. Grades on the paper will be based on the quality of the writing (grammar counts), the justification for the model you estimate, and the accuracy with which you interpret your statistical models.

Please familiarize yourself with the Undergraduate Academic Code of Honor:
http://www.nd.edu/~hnrcode/docs/handbook.htm.

Brief Outline, ECON 30331
Fall 2014

I. Moving from correlation to causation
   Chapter 1, Wooldridge

II. The bivariate regression model
    Chapter 2, Wooldridge

III. Multiple regression analysis: estimation
     Chapter 3, Wooldridge

IV. Multiple regression analysis: inference
    Chapter 4, Wooldridge

V. Dummy variables
   Chapter 7, Wooldridge

VI. Applications – OLS regressions

VII. OLS Asymptotics
   Chapter 5, Wooldridge

VIII. Time series data
   Chapters 10 - 12, Wooldridge

   I am not thrilled with the time series chapters in this book. I think they are overly complicated and as a result, they in some spots, unreadable. We will focus on the following sections:

   10.1 The Nature of Time Series Data
   10.4 Functional Form and Dummy Variables
   10.5 Trends and Seasonality

   11.1 Stationary and Weakly Dependent Series
   11.3 Using Highly Persistent Time Series in Regression Analysis

   12.1 Properties of OLS with Serially Correlated Errors
   12.2 Testing for Series Correlation
   12.3 Correcting for Serial Correlation

IX. Panel Data Models
   Chapters 13 and 14, Wooldridge

X. Instrumental variables
   Chapter 15, Wooldridge

XI. Regression discontinuity models
